PA2 Source and Integration Register

Performed by: Hoàng Cao Phong | **Reviewed by:** Võ Mỹ Ngọc (assigned; review record not supplied) | **Edited by:** Hoàng Cao Phong

Checked on 29 October 2026. This register identifies the pushed work used in the integrated submission. It does not treat a branch name or a Trello status as proof of peer review or meeting attendance.

Source branch and checked revision	Observed contribution	Integration decision
`research/PA2_Ngoc_Vision_Overview` at `9010a8e`	Vision Introduction, Positioning, nine product-feature paragraphs and two Mermaid workflows in `Ngoc_VisionDocs/ngoc.md`.	Used as the primary Vision source. Stakeholder, product-overview and quality sections were integrated from PA1, Kiên's contribution and the PA2 working draft.
`research/PA2_Kien_ProductOverview` at `8f63cb8`	Product perspective and assumptions in `Kien_ProductOverview/kien.md`.	Used for Vision Section 4, with proposed architecture distinguished from implemented behavior.
`dev` at `4f4c90e`	Kiên's discovery/reservation API contract, Spec Kit training log and tutorial artifacts.	Included as supporting technical and training evidence. The API contract is not treated as a completed production feature.
`research/PA2_Phong_PjPlan` at `bbaf7a5`	Project Plan, sprint schedule, risks, weekly integration record and dated Trello screenshot.	Used as the Plan source and report/board evidence.
`research/PA2_base` at `69cd00c` and `main` at `cb5bf77`	PA2 starting structure and prior PA1 baseline.	Used for project scope and submission context.

The fetched remote branch list did not contain PA2-specific branches for Nhân or Duy. Their working PA2 Markdown files in this checkout were empty at inspection. Stakeholder and AI-feature descriptions in the integrated Vision therefore derive from the PA1 survey, Ngọc's pushed Vision and the PA2 working draft, with that provenance stated in the relevant sections.

Quality decisions

Performed by: Hoàng Cao Phong | **Reviewed by:** Võ Mỹ Ngọc (assigned; review record not supplied) | **Edited by:** Hoàng Cao Phong

- The assignment requires Scrum. RUP is used only as a Vision document structure; the Plan remains five Scrum sprints.
- A table request is distinct from a confirmed reservation. An event inquiry has a separate proposal path.
- Proposed targets and architecture are labelled as plans. No completed workflow, meeting or test is claimed solely because a draft describes it.
- Supporting copies in this package standardize the initial reservation state name as `AWAITING_CONFIRMATION` and use uniform report wording. The source branches remain unchanged; implementation should reconcile identifiers against the approved API contract before coding.
- The supplied materials do not establish individual training completion for all five members, complete AI-use declarations or actual PA2 ceremony minutes. Their status is stated explicitly in the package rather than invented.
