DineVina — Spec Kit Initialization and Training Record (PA2)

Performed by: Hoàng Cao Phong (initialization integration), Nguyễn Trung Kiên (individual tutorial record) | **Reviewed by:** Võ Mỹ Ngọc (assigned; review record not supplied) | **Edited by:** Hoàng Cao Phong

1. Project initialization

Performed by: Hoàng Cao Phong | **Reviewed by:** Nguyễn Trung Kiên (assigned; review record not supplied) | **Edited by:** Hoàng Cao Phong

The repository contains an initialized `src/.specify/` structure with `memory/constitution.md`, integration metadata, workflow commands, templates and setup scripts. The submission copy is in `src/.specify/` inside the package. The constitution defines visible booking states, verified venue information, privacy, reproducible quality and review governance. This is source-artifact evidence of initialization; it does not establish that every member completed the course tutorials.

2. Individual training evidence

Performed by: Hoàng Cao Phong (register) | **Reviewed by:** Võ Mỹ Ngọc (assigned; review record not supplied) | **Edited by:** Hoàng Cao Phong

Member	Evidence found by 29 Oct	What the available record supports
Nguyễn Trung Kiên	Individual log on `dev`; tutorial constitution, specification, plan and tasks copied under `evidence/Kien-tutorial/`.	Kiên reports CLI setup, project initialization, constitution, feature specification, plan/tasks and an eight-scenario test run. The training log is self-reported; its Windows commands were not rerun during integration.
Hoàng Cao Phong	Repository `src/.specify/` initialized; no personal tutorial completion log found.	Project setup artifact exists; personal tutorial completion cannot be certified from it.
Võ Mỹ Ngọc	No personal tutorial record found on the fetched Vision branch.	Individual completion cannot be certified from available files.
Lương Thiện Nhân	No PA2 training record found on fetched branches.	Individual completion cannot be certified from available files.
Trương Khánh Duy	No PA2 training record found on fetched branches.	Individual completion cannot be certified from available files.

Each member should add the tutorial date and title or link, commands or workflow steps performed, one concrete lesson learned and a genuine screenshot or log before the team states that all five completed training. The course provides tutorial links separately, so this report does not invent them.

3. Technical takeaway

Performed by: Hoàng Cao Phong (summary of Kiên's source) | **Reviewed by:** Nguyễn Trung Kiên (assigned; review record not supplied) | **Edited by:** Hoàng Cao Phong

The available tutorial shows a specification-first route: document invariants and user scenarios, derive a technical plan, split work into verifiable tasks and test the result. For DineVina, the reservation request state must be explicit, and approved venue data must be separated from draft data. The tutorial artifacts can guide later implementation but do not by themselves prove production readiness.
